

INAPORT

Enterprise Data Integration

for GoldMine

Inaport for GoldMine

Inaport helps deliver the expected value of a GoldMine system through comprehensive data integration. Easy and efficient to use, Inaport allows GoldMine users to import and export data, build multi-level organizational charts, complete missing information, and cleanse or de-duplicate data for maximum customer relationship management.

Maximize GoldMine investment

Enhance existing enterprise systems by integrating enterprise data with GoldMine to achieve comprehensive customer views.

Consolidate customer data

Connect back-office systems with GoldMine and achieve cohesive data across the enterprise for a complete picture of customer interactions.

Reduce disparate and duplicate data

Cleanse and de-duplicate data within GoldMine to eliminate discrepancies and improve the overall customer handling process.

Build multi-level organizational charts

Create any configuration of organizational chart imaginable with a few clicks of the mouse and ensure consistency across charts with automatic updates when changes are made.

Import accounting and pricing details

Direct connections to most accounting systems and standard office applications enables integration of GoldMine with virtually all enterprise systems and data sources for a complete "big picture" view from the sales department to the accounting department.

User friendly and efficient

Each integration step is carefully guided with Wizards and expression builders. A flexible Java-based design facilitates integration efficiency and speed.

Create and preview organization charts in any order imaginable.

Import and Export Wizard assist every step of the data integration process.

Inaport provides 'logical' tables for importing to or exporting from external data sources.

Input Field	Contact Field	Data	Write to
Address1	ADDRESS1 (Address 1)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Address2	ADDRESS2 (Address 2)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
City	CITY (City)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
State	STATE (State)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Zip	ZIP (Zip)	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
uAcntNo	KEY1 (Contact Type)	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Dear		<input type="checkbox"/>	<input type="checkbox"/>
LastName		<input type="checkbox"/>	<input type="checkbox"/>
Phone1		<input type="checkbox"/>	<input type="checkbox"/>

Inaport integrates GoldMine with corporate systems to enhance the value of your investment and enable regular, automatic updates to and from external data sources.

Enterprise Data Integration

Inaport for GoldMine

Integration

- Import Import external data sources with GoldMine using guided Wizards and expression builders to cleanse, update, and manipulate corporate data for specific needs.
 - Export * Export data from GoldMine to virtually any data source within your organization, including accounting systems, office applications, databases, and mainframes.
 - Sync Aware Changes to the GoldMine database are made using the GoldMine API, so that changes are logged by the GoldMine sync engine and replicated to remote users.
 - Group Manipulation * Build new groups, add, or delete from existing group, and attach automated processes to enable more efficient data manipulation and organization.
 - Automation Automate integrations using Windows Task Scheduler, batch files and scripts, or SQL stored procedures; schedule profiles as required, from 5 minutes to 5 weeks.
-

Connectivity

- GoldMine connections Connect to dBase or SQL versions of GoldMine 5.x BCM, Sales & Marketing, and 6.0.
 - Sample Integrations:
 - Great Plains, AccPac, Mas90, Macola, and other corporate accounting systems.
 - Excel, Access, CSV text files, and standard ODBC-compliant office applications.
 - SQL Server, Oracle, DB2, MySQL, Pervasive and other enterprise systems.
 - AS/400, Dec VAX, IBM, and other mainframe systems.
 - HEAT, Lotus Notes, SAP, and other CRM, SFA and service and support databases.
-

Organizational Charts *

- Design and Automate Design simple or complex multi-level organizational charts with a simple point-and-click wizard, and automate the building and re-building as required.
 - Order Contact Sets Design org charts to suit your needs, for example, order by State - City - Company - Contact, or Company - State - City...or any other combination.
-

Data Cleansing *

- Global Edit Inaport's Global Edit wizard carefully guides global edits and changes, making data cleansing and de-duplication painless and effortless.
 - Delete Records Delete records in the target GoldMine system based on the incoming data during an import operation.
-

Robust and Powerful

- Data Transformation Inaport can manipulate a variety of external information in simple and complex ways and has the power to handle any imaginable data transformation challenge.
